# *Secure Door Entry Using Face Recognition And Thermal Screening*

---

Prince Mohammad Bin Fahd University  
Department of Electrical Engineering

# Outline

- ❖ Project Definition .
- ❖ Project Objectives.
- ❖ Project Specifications .
- ❖ Project Constraints and Engineering Standards
- ❖ Project Architecture .
- ❖ Planning .
- ❖ Background & Previous Project .
- ❖ Design: subsystem and components Selection
- ❖ Testing.
- ❖ Project Management & Team Work.
- ❖ Impact Of Project.
- ❖ New Skills Acquired And Applied.
- ❖ Completed and Remaining work.
- ❖ Budget estimate
- ❖ References.

# Project Definition

Designing a smart device that allows or disallows people to get access through the door based on their face and body temperature.

# *Project Objectives*

- ❖ To Protect human beings.
- ❖ To Minimize infection of“ COVID 19”  
Corona virus.
- ❖ To Organize people entrance through  
the door.
- ❖ To Do temperature quick check up.
- ❖ To be able to use this smart device at  
every assembly places.

# *Project Specifications*

- ❖ To Allow entry of the person based on his/her recognized face and body temperature .
- ❖ To Recognize the face, capture the video and process it .
- ❖ To Measure the body temperature using IR sensor.
- ❖ To Display the face matching percentage

# Design Constraints & Engineering Standard

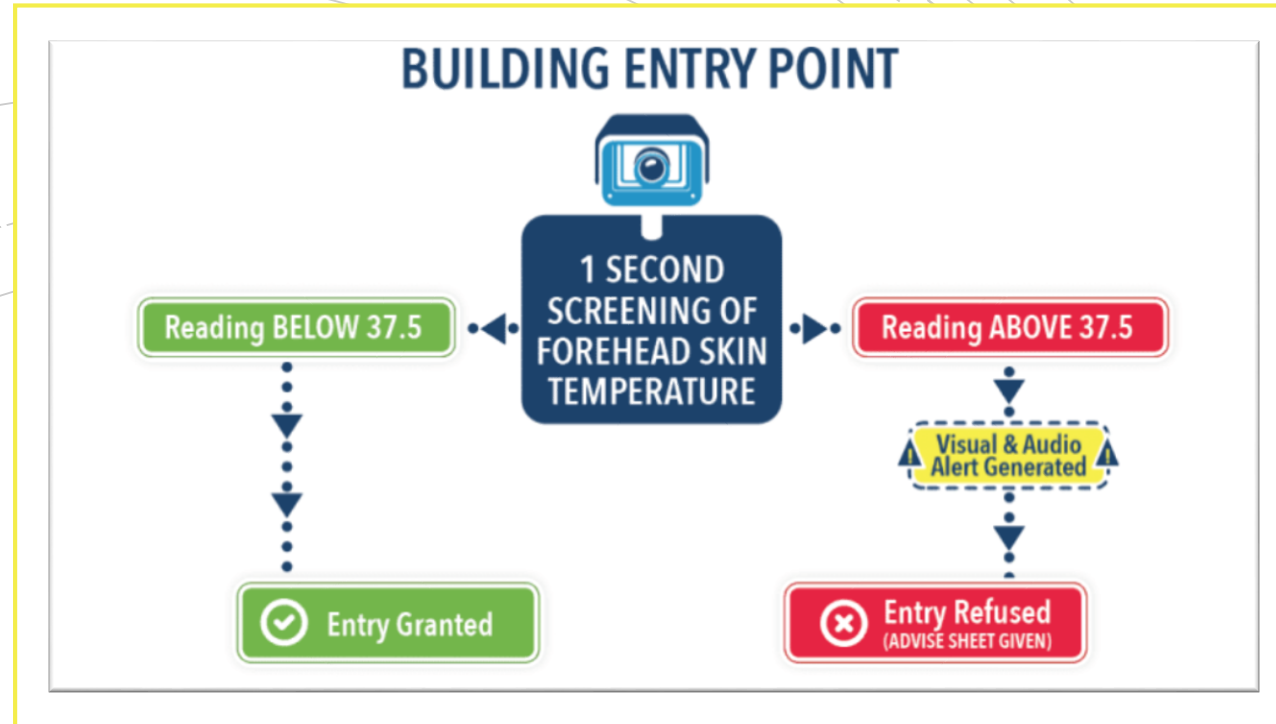

Economic.

Safety.

Social, Culture.

# ***Project Architecture***

# *Planning*

---

- ❖ We ordered most of the components from the online market.
- ❖ We were able to borrow some components from the university
- ❖ We were able to test and measure the components at PMU labs.

# *Previous Project Summary*

Project	1	2	3	4	Our project
<b>Temperature sensor</b>	Yes	Yes	Yes	Yes	Yes
<b>Way of measuring temperature</b>	Through forehead	Through human body	Through forehead	Through human body	Through human body
<b>Camera</b>	Yes	N/A	Yes	Yes	Yes
<b>Screen Monitor</b>	Yes	Yes	Yes	Yes	Yes

# *Design*

- Computer vision based image processing for face recognition, thermal screening using temperature sensor, door locking system implementation.
- .
- ❖ To study face detection and recognition algorithm applicable in real-time processing.
- ❖ To prepare the processor OS.
- ❖ To simulate the face recognition algorithm.
- ❖ Implement the face recognition algorithm in the processor.

# Face Recognition

- Face recognition systems can operate basically in two modes:
  - ❖ Verification a facial image.
  - ❖ Identification or facial recognition.

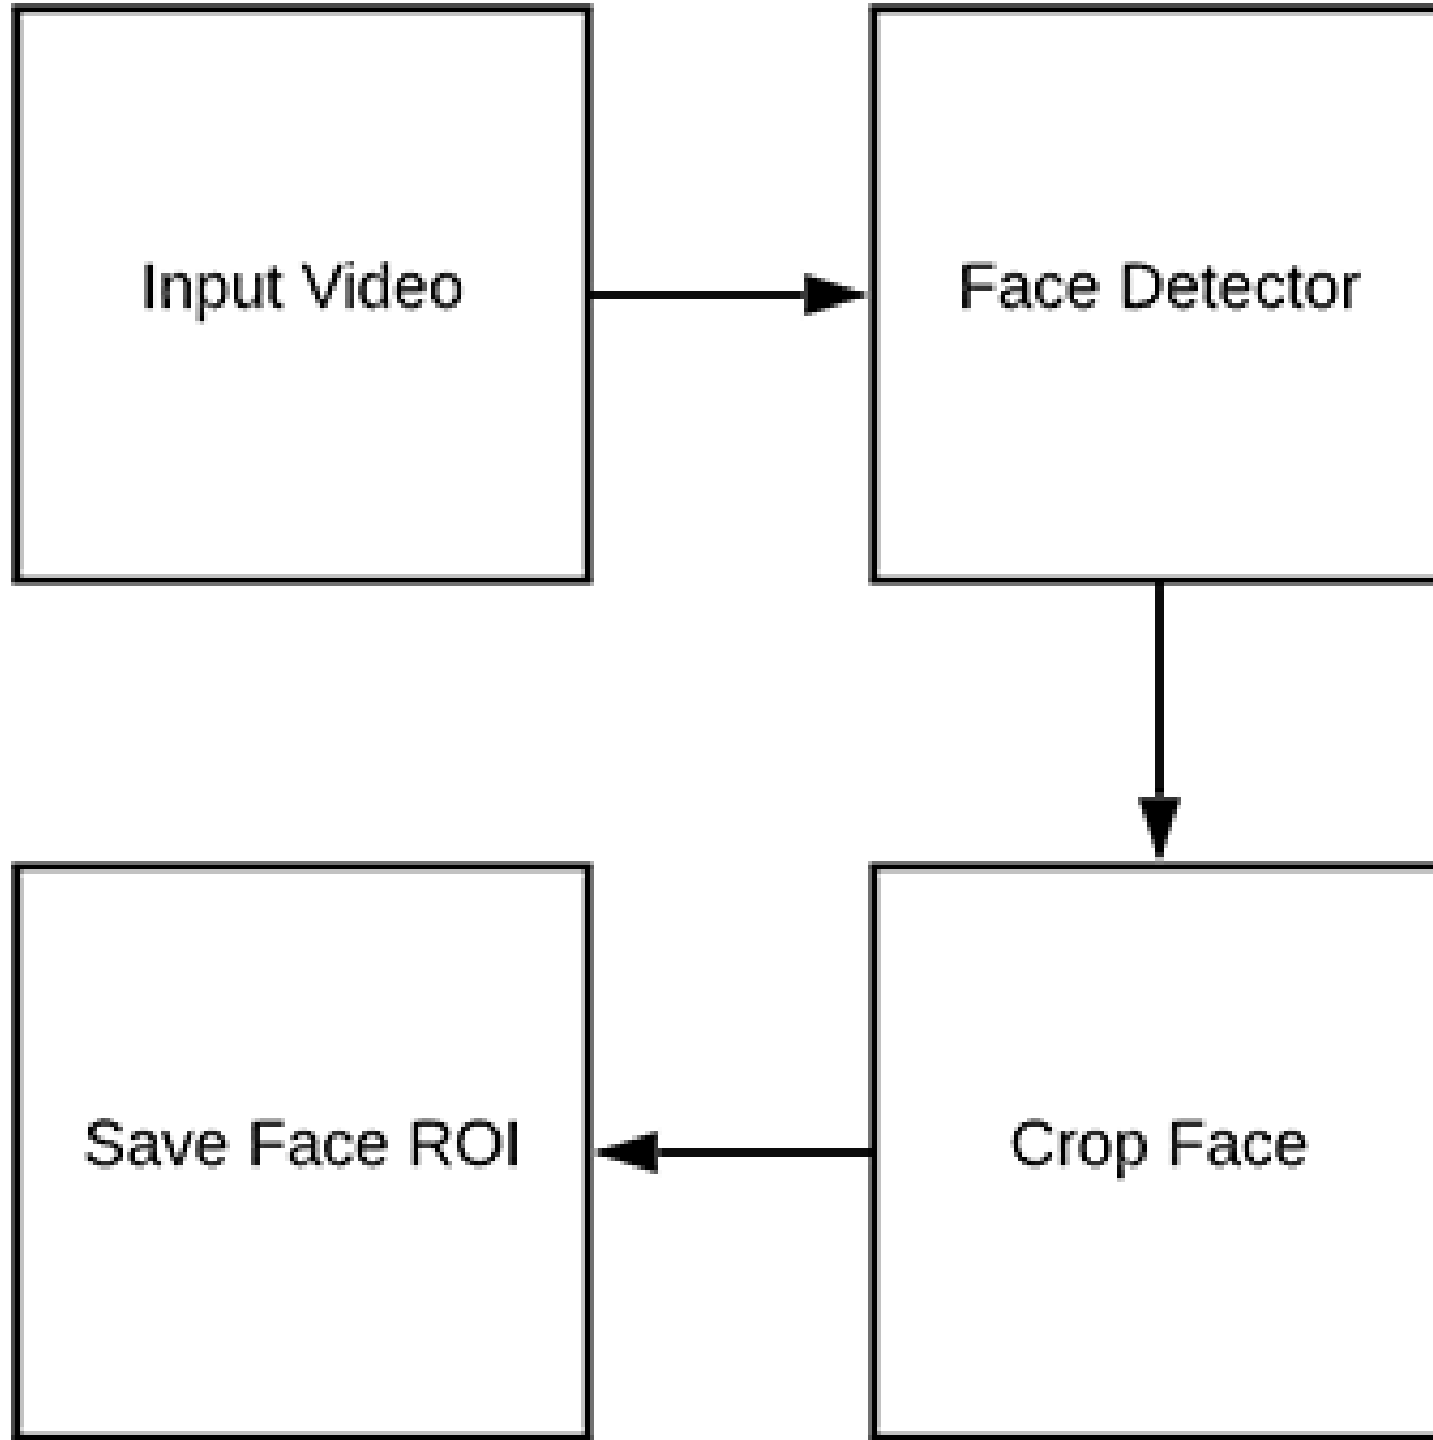

# Difference between Face detection and Face recognition

Face Detection: Is finding the location and size of faces.

Face Recognition: is resized and corpped the image then converted to gray scale.

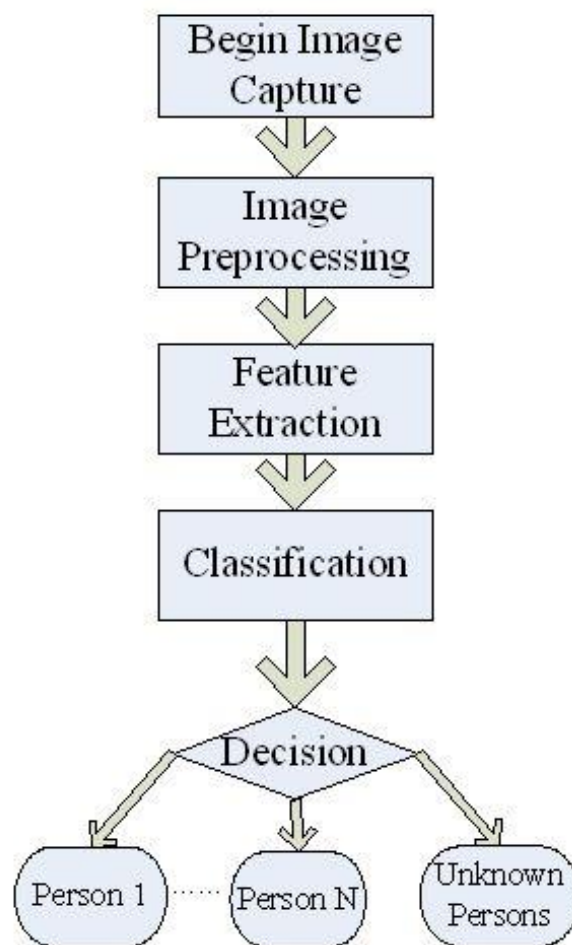

**Local Binary Pattern** detarepo si :(PBL)

# Local Binary pattern Histogram

# Testing

---

We wrote programs in python and we test(extract) the result:

- ❖ Face Detection program
- ❖ Create Data file.
- ❖ Initiate and run Face recognition program.
- ❖ Test Raspberry PI.

```
import cv2
import sys

faceCascade = cv2.CascadeClassifier('haarcascade_frontalface_default.xml')

video_capture = cv2.VideoCapture(0)

img_counter = 0

while True:
    # Capture frame-by-frame
    ret, frame = video_capture.read()

    gray = cv2.cvtColor(frame, cv2.COLOR_BGR2GRAY)
    k = cv2.waitKey(1)
    faces = faceCascade.detectMultiScale(
        gray,
        scaleFactor=1.5,
        minNeighbors=5,
        minSize=(30, 30),
        flags=cv2.CASCADE_SCALE_IMAGE
    )

    # Draw a rectangle around the faces
    for (x, y, w, h) in faces:
        cv2.rectangle(frame, (x, y), (x+w, y+h), (0, 255, 0), 2)

    # Display the resulting frame
    cv2.imshow('FaceDetection', frame)

    if k%256 == 27: #ESC Pressed
        break
    elif k%256 == 32:
        # SPACE pressed
        img_name = "facedetect_webcam_{}.png".format(img_counter)
        cv2.imwrite(img_name, frame)
        print("{} written!".format(img_name))
        img_counter += 1
```

# Codes for programs

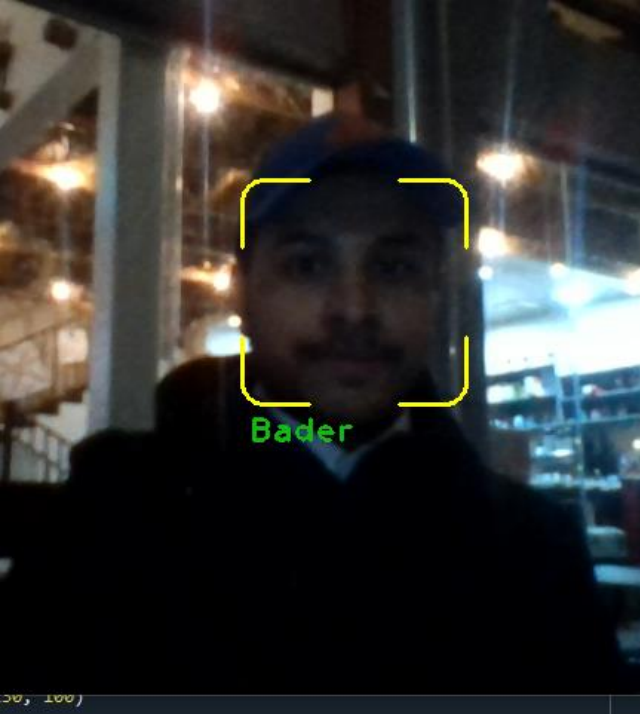

Face Detection code

## ❖ Face Recognition codes:

```
1 size = 4
2 import cv2, sys, numpy, os
3
4 # change the paths below to the location where these files are on your machine
5 # haar_file path
6 haar_file = 'haarcascade_frontalface_default.xml'
7 # path to the main faces directory which contains all the sub_datasets
8 datasets = 'datasets'
9
10
11 print('Training classifier...')
12 # Create a list of images and a list of corresponding names along with a unique id
13 (images, labels, names, id) = ([], [], {}, 0)
14 for (subdirs, dirs, files) in os.walk(datasets):
15     for subdir in dirs:

# Project Management & Team Work

#	Risk Description	Risk Management	Impact
1	Learning a new language (Python)	We learn this new language	We were able to solve this problem and finish the project
2	Losing all the information in the Raspberry Pi	We were able in getting back all the information in 24 hours	We were able to overcome this obstacle

# **New Skills Acquired and Applied**

- ❖ Learning a new language (Python)
- ❖ Implementing Troubleshooting
- ❖ Dealing with time pressure
